## **Assignment - 1 Report**

**TEAM ID : 8**  
**TOPIC : OLYMPIC DATABASE**

### **TEAM MEMBERS:**

**PRAJWAL KAMATH K**  
**PES1UG19CS337**

**PRANAV RAJNISH**  
**PES1UG19CS344**

**RAGHAVENDRA L**  
**PES1UG19CS366**

## **Problem Statement:**

We want to design and implement a database for storing the information of all competitors and their participation in the Olympic Games held over the past years.

A competitor has an competitor ID, name, gender, country, birth date and can have coach

Each Olympiad has the year, a season (summer or winter), the country where it took place, and the city.

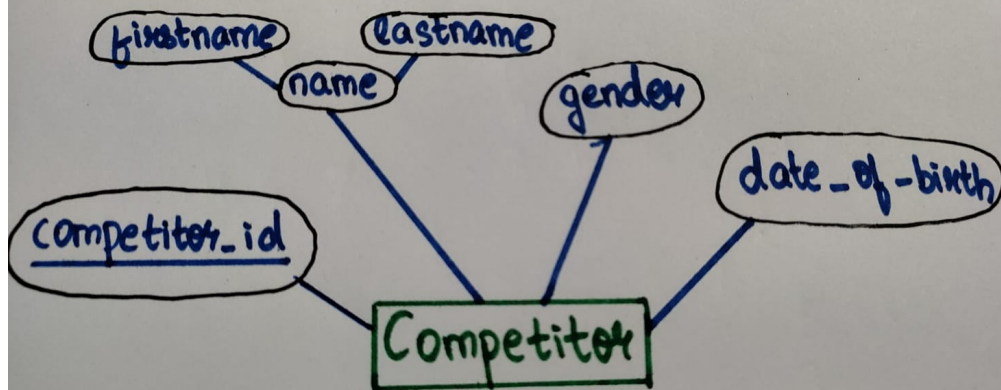

Every competitor in the database participates in at least one Olympiad. A competitor can participate in several events in one Olympiad and can, in fact, participate in more than one Olympiad.

An event has an event name, location, and scheduled time and date, which athletes were scheduled to compete in which events and how they placed, and who the winner(s) of the event was (e.g., what kind of medal they were awarded). Null values are used for winners and placings until the event has been held.

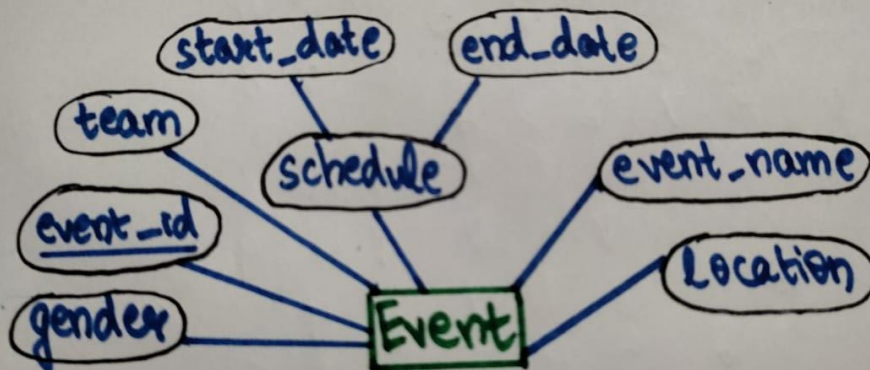

Events in the Olympics may be either individual or team events. If it is a team event, we wish to know who the members of each team were.

## Hand-drawn Entity Snapshots:

Competitor Entity:-

Event Entity:-

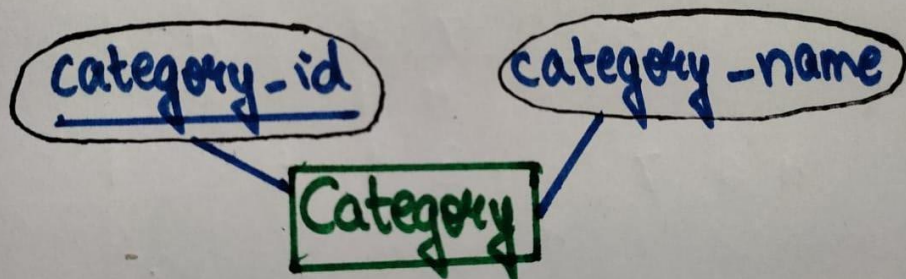

### Country Entity:-

### Olympic Entity:-

Category Entity :-

Medal Entity :-

## **ER Tool Used:**

We used app.diagrams, an open source online app to make our ER diagram.

We decided to use it for the following advantages:

- Easily produces good quality diagrams
- Has a rich set of predefined shapes for all sorts of different diagramming needs
- Allows grouping of shapes
- Smart connectors
- Integrates with Google Drive
- Conveniently exports to a variety of formats
- Allows for collaborative development of diagrams
